Education

Ph.D., Economics, University of Washington, Seattle, WA, USA 2021 – 2027 (Expected)
B.A., Economics, Korea University, Seoul, Republic of Korea 2010 – 2015

Employment History

Junior Economist, Bank of Korea 2015 – 2021

- Inflation Analysis Team, Research Department Feb 2015 – Jul 2017
  Contributed to setting the inflation target for 2016 onward; drafted the *Inflation Report*; analyzed and forecast the housing market.
- National Balance Sheet Team, Economic Statistics Department Aug 2017 – Jul 2019
  Implemented the 2015 benchmark revision for gross fixed capital formation (by industry and institutional sector) and the National Balance Sheet; measured total factor productivity.
- Economic Research Division, Busan Branch Aug 2019 – Jul 2021
  Monitored and wrote reports on the regional economy; received the Best Regional Working Paper Award (2020Q2, 2020Q4).

Research Interests

Primary: International Macroeconomics, Geoeconomics
Secondary: Trade and Industrial Policy, Defense Economics

Job Market Paper

Reshoring Policies in the Intangible Economy

Abstract: Reshoring policies sacrifice the cost advantages of offshoring for economic security. Yet this trade-off may differ for intangible-intensive offshoring firms: their scalable intangibles lower marginal costs but entail fixed costs paid with foreign labor. How do reshoring policies affect these firms' location choices and Home consumption, output, and welfare? Using a two-country general equilibrium model with heterogeneous firms and endogenous entry, I compare lump-sum subsidies, tax credits, and tariffs. All three policies reduce offshoring and raise Home consumption and transitional welfare, but only subsidies increase output. The Ramsey-optimal mix combines a lump-sum subsidy worth 8.4% of offshoring profits with a 13.1% tariff, raising Home welfare by 4.0%. These gains come from correcting a distortion: offshoring firms and households ignore how their collective demand for foreign labor raises the foreign wage. Reshoring curbs this excess demand by moving production home and replacing high intangible fixed costs abroad with lower domestic ones, raising Home welfare.

Working Papers

The Effect of Intangible Capital on Offshoring

Abstract: This paper analyzes the impact of intangible capital on firms' offshoring decisions, aggregate productivity, and external competitiveness. I develop a two-country offshoring model with endogenous intangible investment that captures its unique scalability in a framework featuring heterogeneous firm entry and exit. The model successfully replicates the key post-GFC U.S. empirical regularities—the coexistence of aggregate productivity gains and real exchange rate appreciation. Following a positive productivity shock, the entry of domestic firms lowers average firm productivity and raises domestic prices, thereby amplifying the Harrod–Balassa–Samuelson effect. Furthermore, incorporating intangibles yields substantially larger aggregate productivity gains than non-intangible models by improving resource allocation. This research contributes by endogenously modeling the scalability of intangible capital—a crucial yet previously understudied factor in offshoring models.
